# MePa

MePas (Metal Panels) are fine stainless steel screens available in standard modules or full-size.

The metallic material is processed like lace: delicate, intricate designs on super thin metal sheets make the panels extremely light and airy without compromising structure and strength, thanks to the resilience of steel.

These innovative large-format steel panels may be employed as space dividers, decorative features and curtains creating unique visual and tactile experiences. Available on catalogue collections or as customizable sets.

Shadows and reflections, details and large surfaces, MePas allow the realization of glamorous and exclusive environments, as they may be adapted to different styles and settings.

MePas are finely processed, yet made of extremely hard stainless steel. The technology employed grants complete freedom to realize very detailed and complex designs.

MePas play on the metal's surface and shine. New effects and feels are created by alternating fills and voids, shiny and satin surfaces, engraved or semi-engraved.

MePas exploit the flexibility and strength of steel. The plates' curvatures give special plasticity and form to the panels creating innovative objects.
